

Quick Disconnects (5) and (8) Sizes

What do they mean?

Both the Male and Female tabs should correspond with one another (either 0.5mm or 0.8mm) to form a secure connection

The Difference Is...

For a male connector, the (5) and (8) represent the thickness of the Nema Tab, either being 0.5mm or 0.8mm. For a female connector, it represents the space in which the tab of the male connector fits into. When fitting together a male and female connector the sizes should correspond with each other.

Brass

Temperature Rating: 75°C

Voltage Rating: 300 Volts Max

Product Description

Quick disconnects create a splice when fitted together to easily connect or disconnect without causing damage to the terminal or insulation.
